HUMAN RESOURCES

HRMS

OVERVIEW

A comprehensive HR platform covering attendance, leave, payroll, and employee records — built for multi-branch organizations that need accuracy, structure, and full auditability.

KEY FEATURES

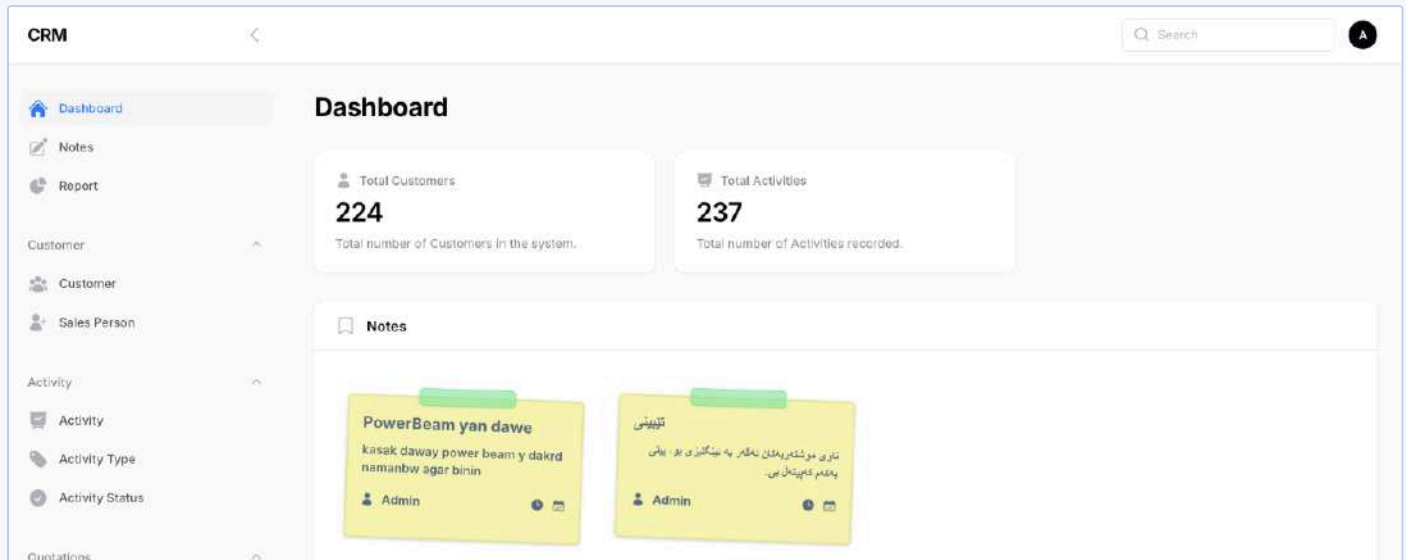

- Biometric attendance with selfie capture, shift management & real-time event logging
- Full leave lifecycle — types, policies, balances, approvals & transaction ledger
- Payroll with configurable salary structures, multi-currency & social security rules
- Multi-branch employee management — departments, positions, documents & compensation

PROBLEMS IT SOLVES

- Manual attendance errors — device-linked punch logs replace paper & spreadsheets
- Leave disputes — structured approvals and an auditable ledger eliminate ambiguity
- Payroll miscalculations — enforced salary rules reduce errors across branches & currencies
- No HR audit trail — every action is logged so management always knows who changed what

CUSTOMER RELATIONS

CRM

OVERVIEW

A purpose-built CRM for managing customers, driving sales activities, and running outreach campaigns — all from one centralized platform.

KEY FEATURES

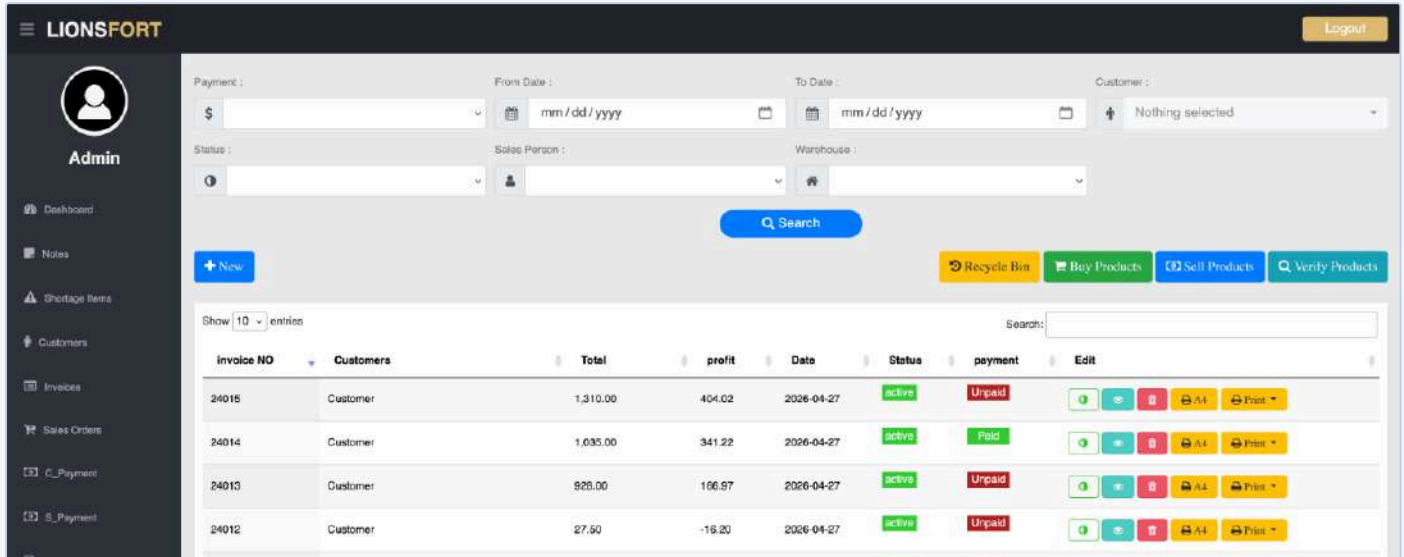

- Customer & company database with categories, types, and assigned salespersons
- Bulk Email & WhatsApp campaign engine with delivery tracking
- Quotations with line items and branded client proposals
- Activity & pipeline tracking — calls, meetings, follow-ups with statuses

PROBLEMS IT SOLVES

- Scattered customer data across spreadsheets and disconnected tools
- Missed follow-ups — activity logs ensure nothing falls through the cracks
- Slow manual outreach — campaigns reach hundreds in one action
- No sales accountability — salesperson assignments give managers clear oversight

STOCK & WAREHOUSE

Inventory

OVERVIEW

A full-featured inventory and sales platform built for multi-warehouse businesses — managing stock, invoices, payments, and analytics with deep audit trails and per-user access control.

KEY FEATURES

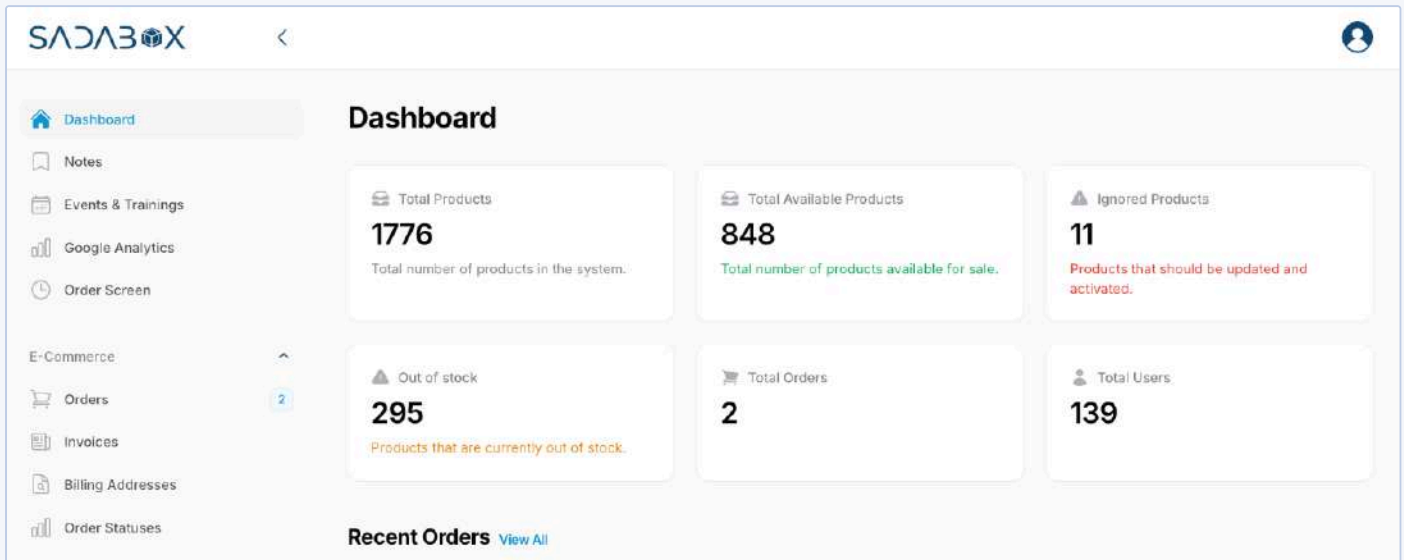

- Multi-warehouse stock tracking with transfers and physical count reconciliation
- Full sales lifecycle — pre-orders, invoices, returns, discounts & payment tracking
- Financial reporting — profit by product/brand/customer, aging summaries & Excel export
- Complete audit trail on all critical data — every change logged with user & timestamp

PROBLEMS IT SOLVES

- Invoice privacy — salespersons can only see their own customers, preventing territory conflicts
- Stock-out surprises — shortage alerts surface critically low products before sales are lost
- Inventory drift — warehouse balancing reconciles physical counts against system records
- Warranty & returns disputes — barcode/serial tracking links each unit to its exact sale

E-COMMERCE

Sadabox

OVERVIEW

Sadabox is our own online store platform. We build you a shop with a mobile app and website so your customers can browse and order from you anytime, anywhere.

KEY FEATURES

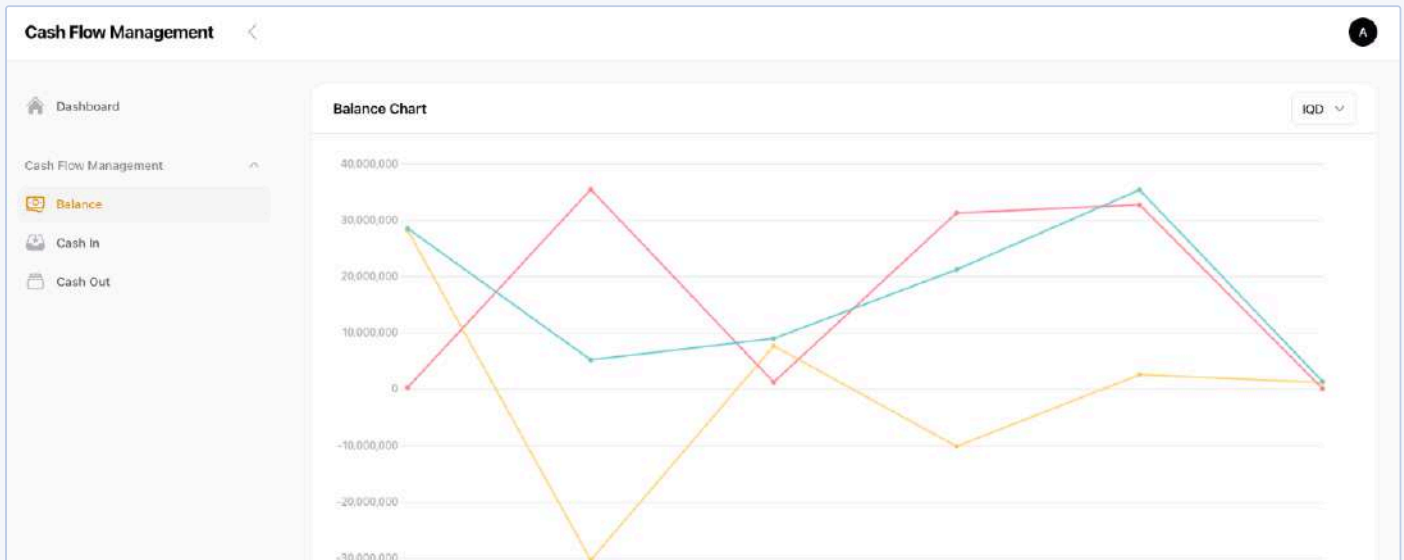

- Mobile app and website — your store works on phone and browser
- Different prices for retail and wholesale customers, set automatically
- Works in Arabic, Kurdish, and English with Iraqi Dinar prices
- Manage orders, stock, and customers from one simple admin panel

PROBLEMS IT SOLVES

- No online store — your business becomes available to buy from 24/7
- Taking orders by phone or WhatsApp — customers order themselves online
- Sending wrong prices to wrong customers — pricing is handled automatically
- Stock going wrong — your inventory stays correct across all channels

FINANCIAL MANAGEMENT

Cash Flow Management

OVERVIEW

A simple system to track all money coming in and going out of your business — in Iraqi Dinar and US Dollar — with account statements, balance charts, and debt tracking per client.

KEY FEATURES

- Set one exchange rate — all IQD/USD calculations update automatically
- Quick entry screen — record cash in and out in one click with auto-generated IDs
- Account statements — see all invoices and payments per client with balance summary
- Balance chart — daily view of cash in, cash out, and net balance in IQD or USD

PROBLEMS IT SOLVES

- Working in IQD and USD with no unified view — one rate converts everything
- Manual balance calculations that result in errors — system computes it automatically
- Accidental data loss — deleted records are never gone, always restorable
- Not knowing who owes you money — per-account debt tracking shows exactly who and how much

Please select a product using the "Analyze by Product" button above.

OVERVIEW

A system to manage what you buy, from whom, and at what price — track supplier costs, create purchase orders, and always know which supplier gives you the best deal.

KEY FEATURES

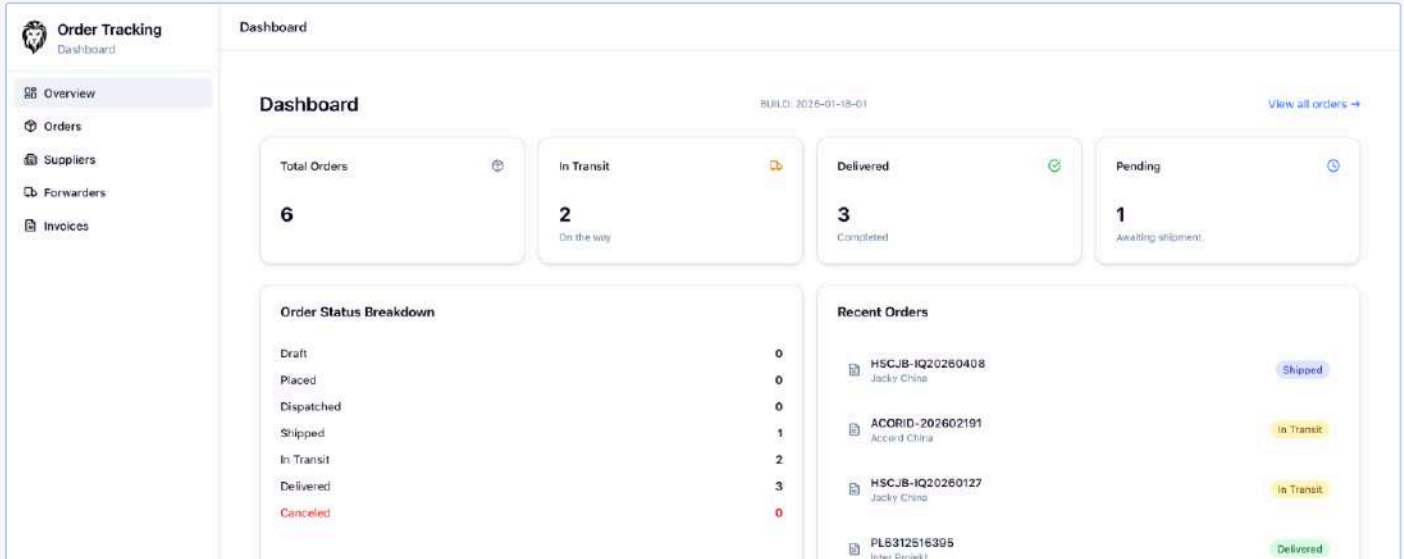

- Store prices from multiple suppliers for the same product and compare them
- Purchase orders with automatic total calculation — edit quantity or price, the rest updates itself
- Clean product catalog with auto-generated unique codes (no manual entry)
- Order approval workflow — pending, approved, or rejected with print support

PROBLEMS IT SOLVES

- No way to compare what different suppliers charge for the same item
- Same product stored with different names across records — now fully consistent
- Manual order total calculations that lead to mistakes — now done automatically
- No history of supplier prices over time — every price change is saved, not overwritten

LOGISTICS

Order Tracking System

OVERVIEW

A simple system to track every import order from placement to delivery — with full status visibility, document storage, and quick search so nothing gets lost or forgotten.

KEY FEATURES

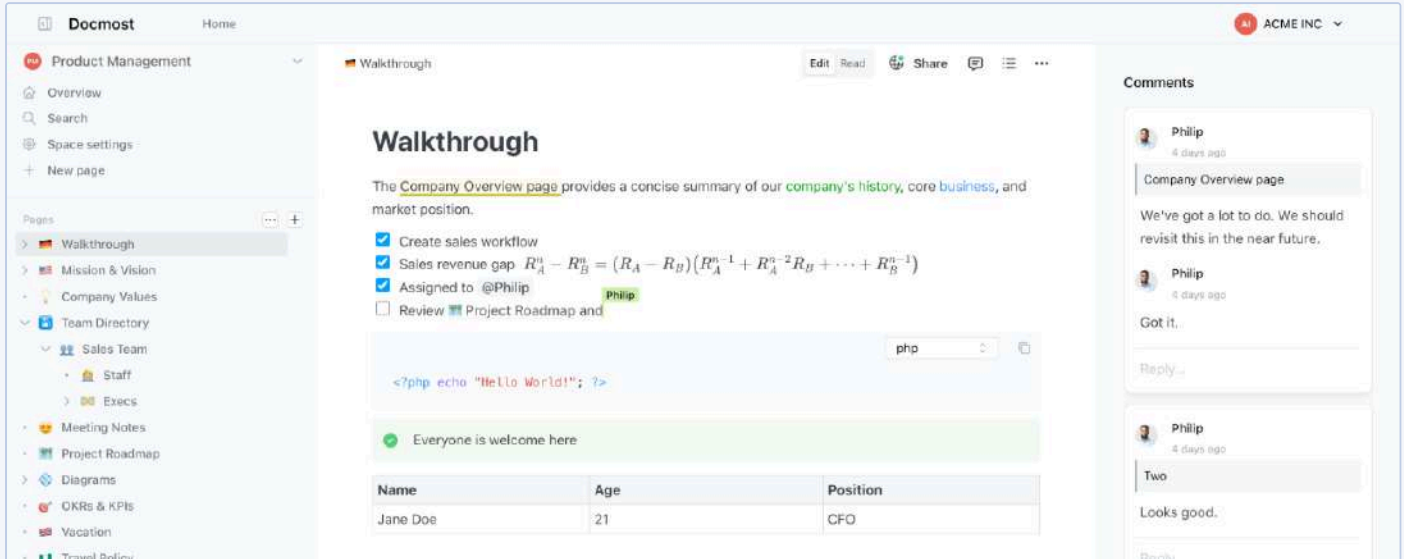

- Clear order pipeline — every shipment moves through tracked stages to delivery
- Attach invoices and documents directly to each order — everything in one place
- Secure login with auto-expiring sessions to protect business data
- Fast search by reference number or shipment name across all orders

PROBLEMS IT SOLVES

- Not knowing where a shipment is — every order has a live status at all times
- Invoices and documents scattered across email and folders — all attached to the order
- Chasing updates from suppliers or forwarders — the team checks the system instead
- Finding an old order taking too long — search by reference in seconds

KNOWLEDGE MANAGEMENT

On-Premises Wiki

OVERVIEW

We deploy Docmost — an open-source, enterprise-ready wiki — on your own servers, giving your teams a secure, private knowledge base with no data ever leaving your infrastructure. It is a modern alternative to Confluence and Notion, built for real-time collaboration and full data ownership.

KEY FEATURES

- Real-time collaborative editing with live cursors
- Spaces per team, project, or department with granular permissions
- Built-in diagrams: Draw.io, Excalidraw & Mermaid
- Full-text search across all pages and attachments
- Version history — track and revert any change
- Runs fully on-premises, air-gap ready, no cloud dependency

PROBLEMS IT SOLVES

- Knowledge scattered across emails, chats, and local files
- Sensitive documentation stored on third-party cloud servers
- No single source of truth for processes and procedures
- High cost of proprietary tools like Confluence or Notion
- New staff taking too long to onboard without documented workflows

DIGITAL PRESENCE

Business Websites

OVERVIEW

We design and develop professional business websites tailored to each client's brand and goals. Beyond launch, we optimize every site for search engines (SEO) — improving visibility, driving organic traffic, and ensuring businesses can be found by the right audience online.

WEBSITES WE'VE BUILT

HezrraLink

A brand built on two powerful principles: strength and speed. Providing top-quality products to meet the demands of modern connectivity and infrastructure.

hezrralink.com

Hazha Company

Founded in 2006 for import and sale of medicines and medical supplies, registered in Erbil. Proudly serving the healthcare needs of communities across Iraq and Kurdistan.

hazhacompany.com

— ARTIFICIAL INTELLIGENCE

AI Implementation

OVERVIEW

We integrate AI into your business — from smart chatbots that answer customer questions, to automated workflows that handle repetitive work, to intelligent search across your company data. Custom AI solutions tailored to how your business actually runs.

KEY FEATURES

- AI chatbots for customer support and internal staff Q&A
- Document & data analysis — extract insights from invoices, contracts, and reports
- Workflow automation — let AI handle repetitive tasks across your systems
- Intelligent search across your company knowledge base, documents, and data

PROBLEMS IT SOLVES

- Staff spending hours on repetitive tasks — AI handles them in seconds
- Customers waiting too long for answers — AI assistants respond instantly 24/7
- Information buried in documents and emails — AI finds what you need fast
- Manual data entry from invoices and forms — AI extracts and processes it automatically
